SUMMARY

Electronics and Electrical Engineering undergraduate with strong foundations in embedded systems, control systems, and automation, complemented by working knowledge of Machine Learning and Data Analytics. Skilled in building real-world engineering solutions and leveraging data-driven approaches to address practical and research oriented challenges.

WORK EXPERIENCE & INDUSTRIAL TRAINING

PLC Training Trainee (CTTC, Bhubaneswar)

May 2025 – June 2025

- Completed intensive hands-on training in industrial automation focusing on leading PLC platforms.
- Mastered **Ladder Logic (LAD)**, **FBD**, and **Structured Text (STL)** programming for industrial control applications.
- Gained practical experience with **Siemens TIA Portal V17** and **Allen-Bradley RSLogix** software environments.
- Applied principles of automation system design to real-time control scenarios and process troubleshooting.

PROJECTS

Devanagari Script Recognition System

- Developed a machine learning-based system for recognizing handwritten and printed Devanagari characters.
- Applied image preprocessing techniques including normalization and noise reduction for improved model performance.
- Trained classification models using Python (NumPy, Pandas, OpenCV) for character recognition tasks.
- Evaluated and optimized model accuracy through feature extraction and tuning.

Autonomous EV Perception & Emergency Response System

- Designed a real-time perception system integrating object detection and acoustic signal analysis for autonomous vehicles.
- Implemented object detection using computer vision techniques with OpenCV for real-time obstacle identification.
- Developed an acoustic fusion module to detect emergency sirens and trigger automated response mechanisms.
- Utilized multi-sensor data fusion to improve reliability of emergency maneuver decisions.

Android Gamepad (ESP32)

- Designed a wireless Bluetooth game controller interfacing with Android devices.
- Optimized button mapping and serial communication for low latency performance.
- Analyzed input response behavior and improved system efficiency through iterative testing.

Distance Measurement Device (Arduino)

- Built an ultrasonic sensor-based measurement unit with real-time LCD display.
- Implemented data averaging and filtering techniques to reduce sensor noise and improve accuracy.

EDUCATION

2023 – 2027	B.Tech in Electronics and Electrical Engineering , KIIT University, Bhubaneswar (CGPA: 7.11, as of 5th Semester)	
2022	Class 12th , DAV Public School, CDA, Cuttack	(80.4%)
2020	Class 10th , DAV Public School, CDA, Cuttack	(95%)

SKILLS

Programming & Data Tools	Python, C, MATLAB, Jupyter Notebook
Libraries & Frameworks	NumPy, Pandas, OpenCV (basic)
Machine Learning & Data	Machine Learning (Basics), Data Analysis, Data Preprocessing
Software & Tools	Simulink, Siemens TIA Portal V17, RSLogix
Hardware Platforms	Arduino, ESP32, PLCs (Siemens, Allen-Bradley)
Core Competencies	Embedded Systems, Control Systems, Microcontroller Interfacing, Optimization Concepts
